

Statement of Purpose

My name is Orlando Ohashi, I'm Brazilian and I'm 27 years old. I have a Computer Science degree by the Centro Universitário do Pará/Brazil – CESUPA (University Center of the State of Pará), obtained from 1999 to 2002. I have the Master Degree in Electrical Engineering – Applied Computing by the UFPA (Universidade Federal do Pará - Federal University of Pará) fellow by Capes (Coordenação de Aperfeiçoamento de Pessoal de Nível Superior - Coordination of Improvement of Higher Education Staff) from 2003 to 2005. I worked in the MODAL FCT research project with Prof. Dr. Luis Torgo from Mar/2005 to Feb/2006, Porto-Portugal, with a grant from FCT (Fundação para a Ciência e a Tecnologia - Foundation for Science and Technology). In the year of 2004, I started to teach at CESUPA graduation courses of Computer Science and Systems Information. I currently teach the subjects: Programming II - Advanced, Software Project Management and Theoretical Computation. Since Aug/2006 until now, I manage the Software Factory at CESUPA, that provides services of systems development and training.

With respect to my research experience, I can highlight the year I was at the University of Porto (UP), working on project MODAL. In that year I learned a lot, both in terms of research on data mining (the general topic of the project), as well as in terms of data mining technologies. Moreover, this year enabled me to get a better understanding on how research work evolves and also by being integrated at a large research group, LIAAD (former LIACC-NIAAD), to interact with researchers from different origins as well as having direct contact with very good professors. The research environment at LIAAD also enabled me to attend a lot of seminars given by foreign visitors, having access to a very good infrastructure that facilitates research work.

The MODAL (POSI / SRI / 40949 / 2001) project was motivated by a very clear and practical goal with high social impact:- predicting algae blooms on Douro river. These phenomena have a direct impact on the water quality of the river from which most drinking water in the metropolitan area of Porto is collected. The main objectives of the project were the application, comparison and adaptation of several modelling techniques to the problem of predicting harmful algal blooms in the hydrographical bay of river Douro, namely in the reservoir of the Crestuma-Lever dam. In the MODAL project I was responsible for the adaptation and comparison of different models to find the best configuration of the models to the problem goal, predicting outliers. And develop an application desktop for interaction with the models created.

The research experience obtained during this year at Portugal was very important to motivate my decision to obtain a PhD working on the area of data mining. In effect, the work on project MODAL has shown me the practical interest and relevance of this research area. Thus motivating me to carry on working in this field. Recently I've run and won an FCT BI-M grant on a new research project named MORWAQ again on LIAAD and under the supervision of Prof. Dr. Luis Torgo. This is a 3 years grant and the work to be carried out in the project is, according to the project proposal, sufficiently innovative so as to fit in the context of a PhD thesis. It is in this context that I'm applying for the MAP-i PhD program. My goals are to both increase my knowledge by means of the subjects taught during the first year of the program and at the same time to use the work to be carried out within project MORWAQ as the basis of my PhD thesis under the supervision of Prof. Dr. Luis Torgo.

The MORWAQ project has as main goal to develop models that can be used for monitoring and predicting water quality parameter values in the context of a water distribution network. The project will address this general goal in the context of the distribution network managed by company Águas do Douro e Paiva (AdDP). SA, which is one of the institutions participating on this project, and is responsible for the water supply of the metropolitan area of Porto, the second largest city in the country. Monitoring and predicting water quality parameters is of key importance both to the company, which has legal limits to obey, but also to the public health, given the role of potable water on human life. In this context, AdDP carries out regular sampling procedures in

different points of the distribution network with the goal of monitoring a set of parameters related with water quality. The project will use the data resulting from these sampling procedures carried out through several years. The models we will develop using these data will address two main problems. The first problem is related to the monitoring activity over the large set of water quality parameters controlled by AdDP, with the goal of providing early warnings on eventual deviations according to the expected "normal" values. In this task, we will develop models that are able to discover these "normal" values for each parameter. The motivation for these models lies on the fact that AdDP has observed that the notion of normality of each parameter is dynamic (provided the legal limits are obeyed), varying across time and place in the network, with factors like the (seasonal and other) patterns of the demand. On this monitoring task we will use models from the areas of activity monitoring and deviation detection, which will be adapted to the particular application of AdDP. This adaptation will involve the use of dynamic limits of normality as well as spatial information related to the topology of the distribution network, leading to what we would call spatio-temporal monitoring models. The second main problem being addressed in the project is the prediction of extreme values on water quality parameters across the network, with the goal of allowing early preventive actions to be taken to avoid the subsequent problems. The predictive models to be developed will use the available historical data, exploring both eventual temporal patterns on the data as well as spatial patterns that may be found by the models. With this type of spatio-temporal models we plan to take advantage of the probable influences caused by the natural flux of water throughout the network. For this task we will adapt models for the prediction of rare extreme values that we developed before in the context of the research project MODAL, to data with spatio-temporal features as it is the case of the data set to be provided by AdDP. All models developed will be analyzed, applied and evaluated using data provided by AdDP, and with the help of company experts so as to better tune the models to the company real world problems.

My work within the project will address both these two main tasks described above. The thesis will thus be on the general area of spatio-temporal data mining that has been receiving increasing attention in the field. In particular we will be developing both monitoring and prediction models in the context of spatio-temporal data obtained from a sensor network. The models will be tested and evaluated on the AdDP water distribution network data. Given my previous involvement on a related problem, the knowledge I've acquired on the MODAL project, and the knowledge I already have of the research environment where the thesis work will be carried out, I think I have good conditions to succeed in this thesis project.

Orlando Shigueo Ohashi Junior
Curriculum Vitae

Personal Data

Name Orlando Shigueo Ohashi Junior
Parents Orlando Shigueo Ohashi e Orlandina Nylander Brito
Date of Birth 02/04/1981 - Belém/PA – Brazil
Sex masculine
Nationality Brazilian
Mail ohashijr@gmail.com

Education

2003 - 2005 M. Sc. in Electric Engineering - *Applied Computing*
Universidade Federal do Pará - UFPA, Belém, Pará, Brazil
Title: FrameworkRN: Framework 3D para Simulação de Redes Neurais, Finished on 2005
Supervisor: Prof. Dr. Roberto Célio Limão de Oliveira
Scholarship from: Coordenação de Aperfeiçoamento de Pessoal de Nível Superior - CAPES, Brazil.

Course Average 4 subjects with score E.
2 subjects with score B.
score: (E) excellent, (B) good, (R) regular e (I) inadequate.

1999 - 2002 B. Sc. in Computer Science.
Centro Universitário do Pará, CESUPA, Brazil
Title: Uma abordagem para o problema de seleção de ações no mundo Wumpus empregando agentes baseados em Redes Neurais
Supervisor: Prof. Dr. Gustavo Augusto Lima de Campos

Course Average score 8.56 in 60 subjects.
score between 0.00 and 10.00.

Complement Education

1999 - 1999 Course of Math - Conclusão do Estágio I de Matemática.
Kumon Instituto de Educação, KUMON, Brasil

2001 - 2001 Course of Math - Conclusão do Estágio L de Matemática.

Kumon Instituto de Educação, KUMON, Brasil

- 1996 - 2002** Advanced Course in English.
Cultura Inglesa, CULTURA INGLESA, Brazil
- 2003 - 2003** Short Course Oral Communication - A Arte de Falar em Público.
Serviço de Apoio às Micro e Pequenas Empresas de Belém, Belem, SEBRAE/PA, Brazil
- 2006 - 2006** Short Course Teaching Estrategies - Metodologias Ativas na Sala de Aula.
Centro Universitário do Pará, CESUPA, Brazil
- 2008 - 2008** Short Course - Enterprise Java Beans.
Caelum - Ensino e Soluções em Java, CAELUM, Brazil

Technical Skills

1. O.S.

Ubuntu, Debian, Windows (XP).

2. Programming Languages

R, Java (*JSF, Servlet, JSP, JPA, Hibernate, Tomcat, Jboss, Glassfish, ejb3, JEE, JSE*), PHP, Ruby, C.

3. DataBases

MySQL, PostgreSQL.

4. Tools

Netbeans, Emacs, Eclipse.

5. Others

Latex, subversion, dotProject, moodle.

Professional Experience

1. Centro Universitário do Pará - CESUPA

Activities

02/2004 - 07/2004 Teaching graduate program - Bacharelado em Ciências Ambientais

Subjects:

Informática Aplicada

08/2004 - 12/2004 Teaching graduate program – Information Systems Course

Subjects:

Informática Aplicada , Introdução a Informática , Lab. Programação Avançada III , Sistema de Banco de Dados

03/2006 - 07/2006 Teaching graduate program – Data Processing Course

Subjects:

Projeto Integrado (Programação)

08/2006 - 12/2006 Teaching graduate program – Computer Science Course

Subjects:

Estrutura de Dados , Fundamentos Teóricos da Computação , Projeto Integrado (Programação) , Projeto Integrado (Engenharia Software)

02/2007 - 07/2007 Teaching graduate program – Computer Science Course

Subjects:

Engenharia de Software , Fundamentos Teóricos da Computação , Laboratório de Programação (Java Avançado) , Projeto Integrado (Engenharia Software)

02/2007 - now Manager - Software Factory CESUPA

Activity:

Manager of Software Factory of CESUPA.

04/2007 - 06/2007 Teaching post-graduate program – Post-graduate in System Development

Subjects:

Programação para Ambiente Distribuídos

08/2007 - Atual Teaching graduate program – Computer Science Course

Subjects:

Laboratório de Programação II - Java , Gerencia de Projeto de Software , Fundamentos Teóricos da Computação

2. Universidade Porto - LIACC/NIAAD - LIACC/NIAAD

Activities

03/2005 - 03/2006 Research

Research Lines:

Data Mining, Machine Learning

03/2005 - 03/2006 Research Projects

POSI/SRI/40949/2001 - MODAL - MODELOS DE PREVISÃO DA CONCENTRAÇÃO DE ALGAS NO RIO DOURO, UP, Porto, Portugal.

Research Lines

To Whom It May Concern

Orlando Shigueo Ohashi Junior has worked under my supervision during one year in the context of a research project (Project MODAL, <http://liaad.inescporto.pt/modys/projects/modal>) of which I was the principal investigator.

My general opinion of Orlando Ohashi is that he is a very good prospective student. Along the time he was involved in the research carried out during the project, he has always shown good capabilities both technical as well as in terms of basic research. He has fulfilled successfully all tasks that were assigned to him during the project. He has also shown good programming skills and was able to very quickly learn new tools that were presented to him during this year, thus showing very good learning capabilities. Orlando Ohashi has a very good working discipline as well as a strong will to learn more. He has also shown initiative by providing good suggestions to the work of the project.

In summary, I would classify Orlando Ohashi as a very good prospective student for a PhD program given my one year experience with him in a research context.

Porto, 16 of April 2008

Subject: letter of recommendation

Dear Sirs,

It is indeed very grateful for me to recommend Professor Orlando Ohashi, who is interested in attending to post-graduation level studies at Porto University.

This professional, whom Iâ/-ve known since 2004, has shown considerable evolution and good performance in the development of his academical activities, amongst which I point out his vocation to lead study groups concerning specific themes, in which he fulfills an essential role as tutor, not to mention his interest in research.

Besides his known technical competence, Professor Orlando Ohashi has demonstrated leadership and management skills, as the manager of our Software Factory.

Considering his personal qualities, I consider relevant to stand out his discipline and determination while facing the eventual challenges in his way.

Thus, I believe that the above mentioned Professor will successfully accomplish the objectives suggested by the program.

With my best regards,

Prof. SÃ©rgio Fiuza de Mello Mendes
Vice-Rector
Centro UniversitÃ¡rio do Estado do ParÃ¡-CESUPA
